TECHNOLOGY

WineStation®

The WineStation® is a sophisticated, professional quality, temperature-controlled preservation and dispensing system that's perfect for keeping your premium wines in pristine condition allowing you to enjoy the freshest wine, each and every time.

ENJOY THE PERFECT GLASS OF WINE, EVERY TIME

The WineStation's state of the art temperature control and argon preservation technology ensures that your fine wines are being kept in pristine condition for up to 60 days.

EXPLORE YOUR WINE COLLECTION

With the WineStation you're finally granted the freedom to uncork and enjoy multiple vintages from your personal wine collection without having to throw away what's left over from the evening.

NOT AN OUNCE OF WINE LEFT BEHIND

The WineStation dispensing system eliminates waste of unfinished wines and keeps your wine safe from oxidation. When wine is poured from the WineStation there is only one place it ends up: in your glass, where it belongs and not down the drain.

YOUR POUR PERSONALIZED

With three customizable pouring volumes, you are able to enjoy a unique wine tasting experience in the comfort of your own home.

Pristine PLUS is the perfect pairing to your wine collection.

The WineStation® Advantage

The patented Clean-Pour® dispensing heads make changing bottles and maintenance extraordinarily easy. Unlike all other wine preservation systems, there are no fixed tubes and plumbing that have to be flushed with chemicals or cleaning solutions every time you want to change a bottle.

← The NSF approved Clean-Pour dispensing heads just need a quick wash in hot water and they are ready to go. The design of our independent heads also means that the wine bottles are not "locked" into the cabinet. The argon gas sealed in the bottle will continue to prevent oxidation for 14 days or longer, even when stored outside of the WineStation.

WineStation® Pristine PLUS Features Include:

- Four bottle preservation and dispensing unit
- 60 Day wine preservation with argon gas
- Clean-Pour® Dispensing Head Technology
- Thermo-Electric Cooling System with variable temperature control
- Dual Zone Temperature Upgrade Available
- Three customized measured dispensing options per bottle
- Customizable LCD displays
- Wide Glass Locking Front Door with Interior Lighting
- Stainless Steel finish

Patented Clean-Pour® dispensing technology keeps wine pristinely preserved for up to 60 days.

Locking door

Argon Gas preservation system for zero spoilage

Easy to read and fully programmable LCD screen showcases wine information
